

Gas Flow Alarm Module

I. Introduction

Flow Alarm Unit detection and analysis of gas flow system for gas flow applied to the use of rotameter occasions, because adopt advanced optical technology, even in the use of the rotor flowmeter is very small (1mm) also can be obtained by monitoring and alarm; can adjust the flow value convenient; When the gas flow exceeds the set threshold, the panel indicator turns green to red, and the alarm contact outputs;

II. Product features

Optical sensor, non-contact induction, alarm sensitive

Warning unit rail installation

Panel alarm, traffic light indication;

Flow alarm limit can be easily adjusted;

III. Technical parameters

Power supply: 24VDC

Power: 2W

Glass diameter (glass rotor flowmeter):5--15mm

Relay capacity: DC30V, 2A, AC125V, 0.5A;
